CSE 259 - Logic in Computer Science (Spring 2024)

Recitation-N

Waqar Hassan Khan

Project 2

- Implement a Chess program
- 3 Tasks
  1. Visualize the chess board
  2. Write codes for playerA so that it can move on its own. PlayerB codes are already there!
  3. Use PlayerA’s code to play against PlayerB

Project 2

- We will call **main.** from the console
- If the template is ran, the following output is seen: It asks for whites move and the black moves on it’s own

```
| ?- main.

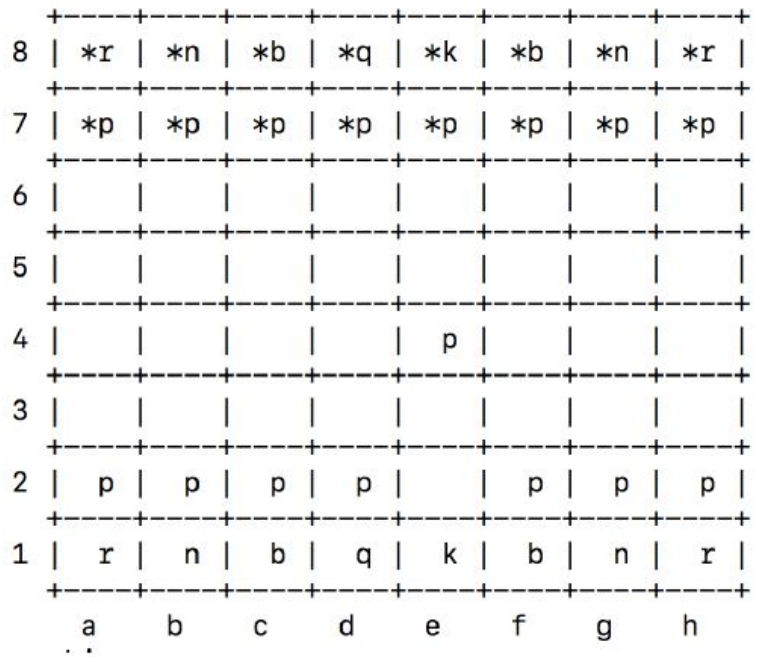
white move -> e2e4.
Working...

black move: e7e5, Rating: bookB
[state(white,_94,_95,_96),state(black,_99,_100,_101),piece(a-8,black,rook),piece(b-8,black,night),piece(c-8,black,bishop),piece(d-8,black,qu

white move ->
```

Project 2 - task 1

- Write codes so that the chase board is drawn visually



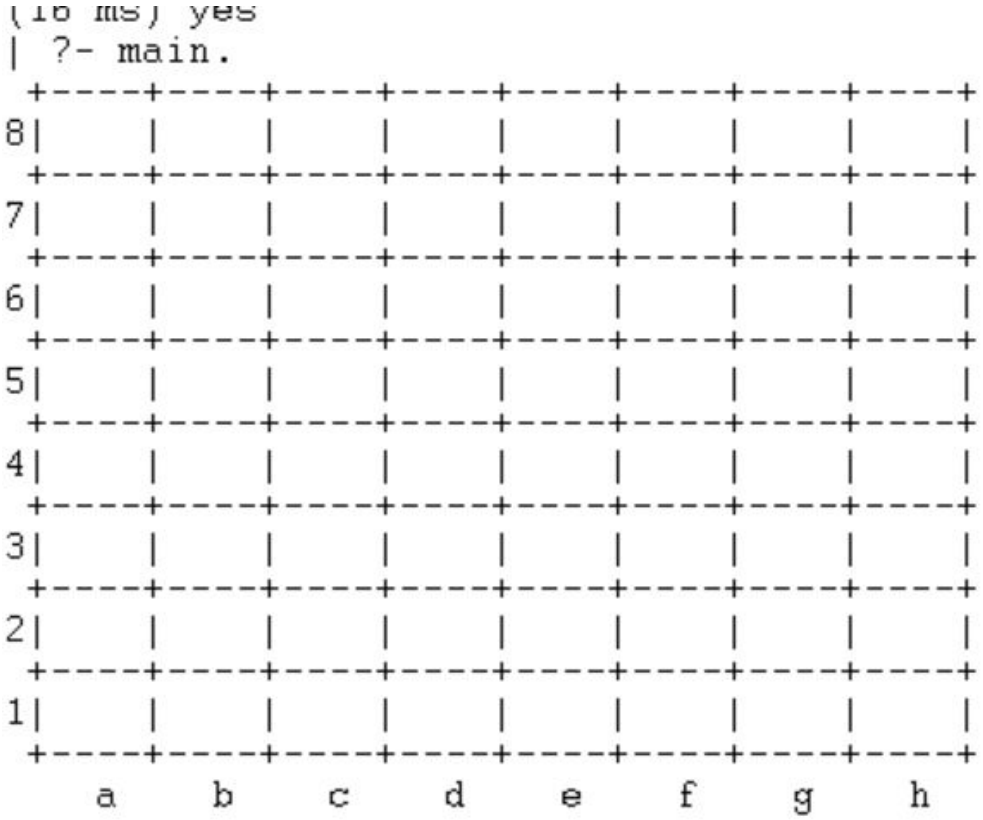
Project 2 - task 2

- Implement playerA’s code. Mimic the code for playerB.

Project 2 - task 3

- Use playerA's code to play against playerB. no need to write much code here. The challenge is to understand the main process of the chess program

Project 2 - Drawing the board



Project 2 - Drawing the board

```
drawSymbol(Symbol, 0).
drawSymbol(Symbol, N) :- N > 0, write(Symbol), N1 is N - 1, drawSymbol(Symbol, N1).
```

- Draws a characters for N times

Project 2 - Drawing the board

- Draws the borders of the chess board

```
drawBorderLine(0) :- drawSymbol('+', 1), nl.
drawBorderLine(Col) :-
    Col > 0,
    drawSymbol('+', 1), drawSymbol('-', 4),
    NewCol is Col - 1,
    drawBorderLine(NewCol).
```

```
| ?- drawBorderLine(8).
+----+----+----+----+----+----+----+----+
```

Project 2 - Drawing the board

- Draws the cells where we will have the chess pieces

```
drawContentCell(Row, 0) :- drawSymbol('|', 1), nl.
drawContentCell(Row, Col) :-
    Col > 0,
    drawSymbol('|', 1), drawSymbol(' ', 4),
    NewCol is Col - 1,
    drawContentCell(Row, NewCol).
```

Project 2 - Drawing the board

- Does the numbering of cells

```
drawPair :-
    drawSymbol(' ', 4), drawSymbol('a', 1), drawSymbol(' ', 4), drawSymbol('b', 1),
    drawSymbol(' ', 4), drawSymbol('c', 1), drawSymbol(' ', 4), drawSymbol('d', 1),
    drawSymbol(' ', 4), drawSymbol('e', 1), drawSymbol(' ', 4), drawSymbol('f', 1),
    drawSymbol(' ', 4), drawSymbol('g', 1), drawSymbol(' ', 4), drawSymbol('h', 1).
```

```
| ?- drawPair.
    a     b     c     d     e     f     g     h

true ?
```

Project 2 - Drawing the board

- The rule to draw the board

```
drawBoard(0, Col) :- drawSymbol(' ', 1), drawBorderLine(Col), drawPair.
drawBoard(Row, Col) :-
  Row > 0,
  drawSymbol(' ', 1),
  drawBorderLine(Col),
  drawSymbol(Row, 1),
  drawContentCell(Row, Col),
  NewRow is Row - 1,
  drawBoard(NewRow, Col).
```
