

# **CSE 259 - Logic in Computer Science**

## **Fall 2024**

### **Recitation-8**

**Waqar Hassan Khan**

# Lists

- Similar to Python lists
- Important to understand so that we can use it on project-3

# Lists

- Lists in Prolog is specified using square brackets
- Example: [mia, vincent, jules, yolanda]

# Lists

- All sorts of Prolog objects can be elements of a list
- Example: [mia, car(toyota), X, 2]

# Lists

- Lists can be empty
- Example: [ ]

# Lists

- Lists can contain other lists as elements
- Example: [mia, [apple, banana], [toyota, honda]]

# Lists

- Lists have two parts: **head** and **tail**. The first element is head, and the rest of the part is tail

```
| ?- [Head | Tail] = [mia, vincent, jules, yolanda].  
Head = mia  
Tail = [vincent,jules,yolanda]  
yes
```

# Lists

- The head and the tail can have any name like variables.

```
| ?- [X | Y] = [1, 2, 5, []].  
X = 1  
Y = [2,5,[]]  
yes
```

# Lists

- Only non-empty lists have head and tail

$\neg \exists x. [x \mid Y] = [].$

no

# Lists

- If there's only one element in the list then it is assigned to head

```
?- [X | Y] = [1].  
X = 1  
Y = []  
yes
```

# Lists

- Extracting the first two elements from a list

```
| ?- [X, Y | W] = [[], dead(z), [2, [b, c]], [], Z].  
W = [[2,[b,c]],[],Z]  
X = []  
Y = dead(z)  
yes  
_
```

# Lists

- Suppose we want to get the 2nd and the 4th element of the list!

```
yes
| ?- [X1, X2, X3, X4 | Tail] = [[], dead(z), [2, [b, c]], [], Z].
```

```
Tail = [Z]
X1 = []
X2 = dead(z)
X3 = [2, [b, c]]
X4 = []
```

```
yes
_
```

# Lists

- Instead of binding the values to so many variables, we can use Anonymous variables.

```
| ?- [_ , X2 , _ , X4 | _] = [[], dead(z), [2, [b, c]], [], Z].
```

```
X2 = dead(z)
```

```
X4 = []
```

```
yes
```

# Lists

- Extracting elements from a list that is inside another list. Suppose inside a list the 5th member is another list and we want to extract the 1st and 3rd member of that list.

```
~ ~  
| ?- [_ , _ , _ , _ , [X1, _ , X3 | _] | _] = [[], 1, 2, 5, [90, 93, 94, 97, 99], 100, dead(monkey)] .
```

```
X1 = 90
```

```
X3 = 94
```

```
yes
```
